that support and drive growth**

iNoesis

Technologies Private Limited

Who we are

iNoesis, a software development company, helps to digitize businesses by focusing on clients' business challenges, needs, and pain points, and by providing business goals-oriented software solutions, including expertise in AI-driven solutions.

We value close, transparent cooperation and encourage our clients to participate actively in the project development life cycle.

For **15+ years** now we have been responsible for your projects and we are proud of it!

Our Expertise

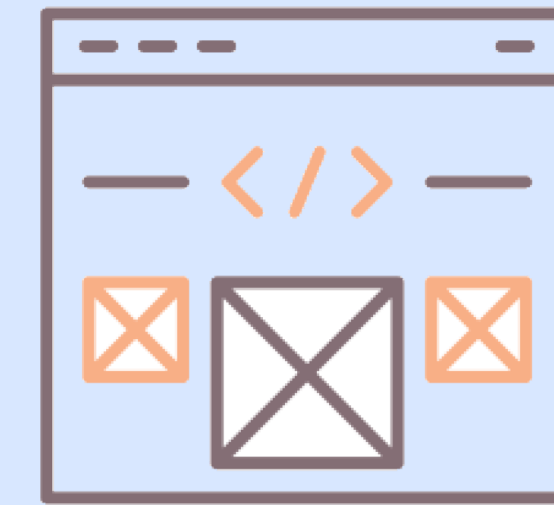

**Design & User
Experience**

**Web & Mobile
Development**

**Artificial
Intelligence**

**Product & MVP
Development**

Design & User Experience

We craft designs deeply rooted in both aesthetics and usability.

UX Audit

Our UX audit methods identify design issues and opportunities by understanding user needs, enabling us to deliver user-centered solutions.

Wireframing and Prototyping

This is a systematic approach to understanding users, tasks, and environments, based on user-centered evaluation, ensuring a comprehensive user experience.

UX/UI Product Designing

With over a decade of experience, we create unique UI/UX interfaces that enhance user experience when interacting with digital products or websites.

Mobile & Web App Designing

Designing mobile and web apps requires a thorough comprehension of user needs, responsive design principles, visual hierarchy, and interaction design to create engaging digital experiences.

User-Centered Visual Designing

Design systems enhance digital product success by reducing redundancy and promoting visual consistency across channels. Our comprehensive design system service provides detailed guidelines, tools, and resources to ensure consistency, efficiency, and scalability in design and development processes.

Web and Mobile Development

We delve deeper, offering comprehensive services.

Web & Mobile Development

Our team is enthusiastic about collaborating with dynamic, professional organizations, encompassing every stage of the development process, from inception to go-to-market.

Backend and APIs

We develop capable teams in backend technologies for major companies, identifying appropriate approaches, scaling, and avoiding over-engineering to avoid unnecessary costs and over-engineering.

Code Audit

Our codebase examination helps identify vulnerabilities and performance bottlenecks, safeguarding data, reputation, and saving resources, ensuring software robustness and competitiveness in the dynamic technology landscape.

Technical Product Discovery

Through research, prototyping, and technical analysis, we evaluate feasibility, identify potential issues, and align your vision with practical implementation.

QA Testing

Quality assurance testing ensures software meets high standards, minimizes post-release fixes, improves time-to-market, and strengthens brand reputation for reliable, error-free solutions.

Load & Performance Tests

Performance testing is a non-functional software technique that assesses an application's stability, speed, scalability, and responsiveness under a specific workload.

Artificial Intelligence

A bridge between AI's technical intricacies and business goals.

NLP

ML can process written or spoken text, offering capabilities such as speech recognition, sentiment analysis, and automatic text summarization.

Generative AI

We utilize advanced generative AI technologies like ChatGPT and GPT-4 to unlock creative enterprises' full potential, predicting significant technological changes.

End-to-end Projects

We can handle data collection, classification, and strategy implementation, from Proof-of-Concept to go-to-market, ensuring comprehensive participation throughout the process.

AI Product Strategy & Discovery

Identifying opportunities and challenges in artificial intelligence is crucial for businesses to effectively utilize this intelligence.

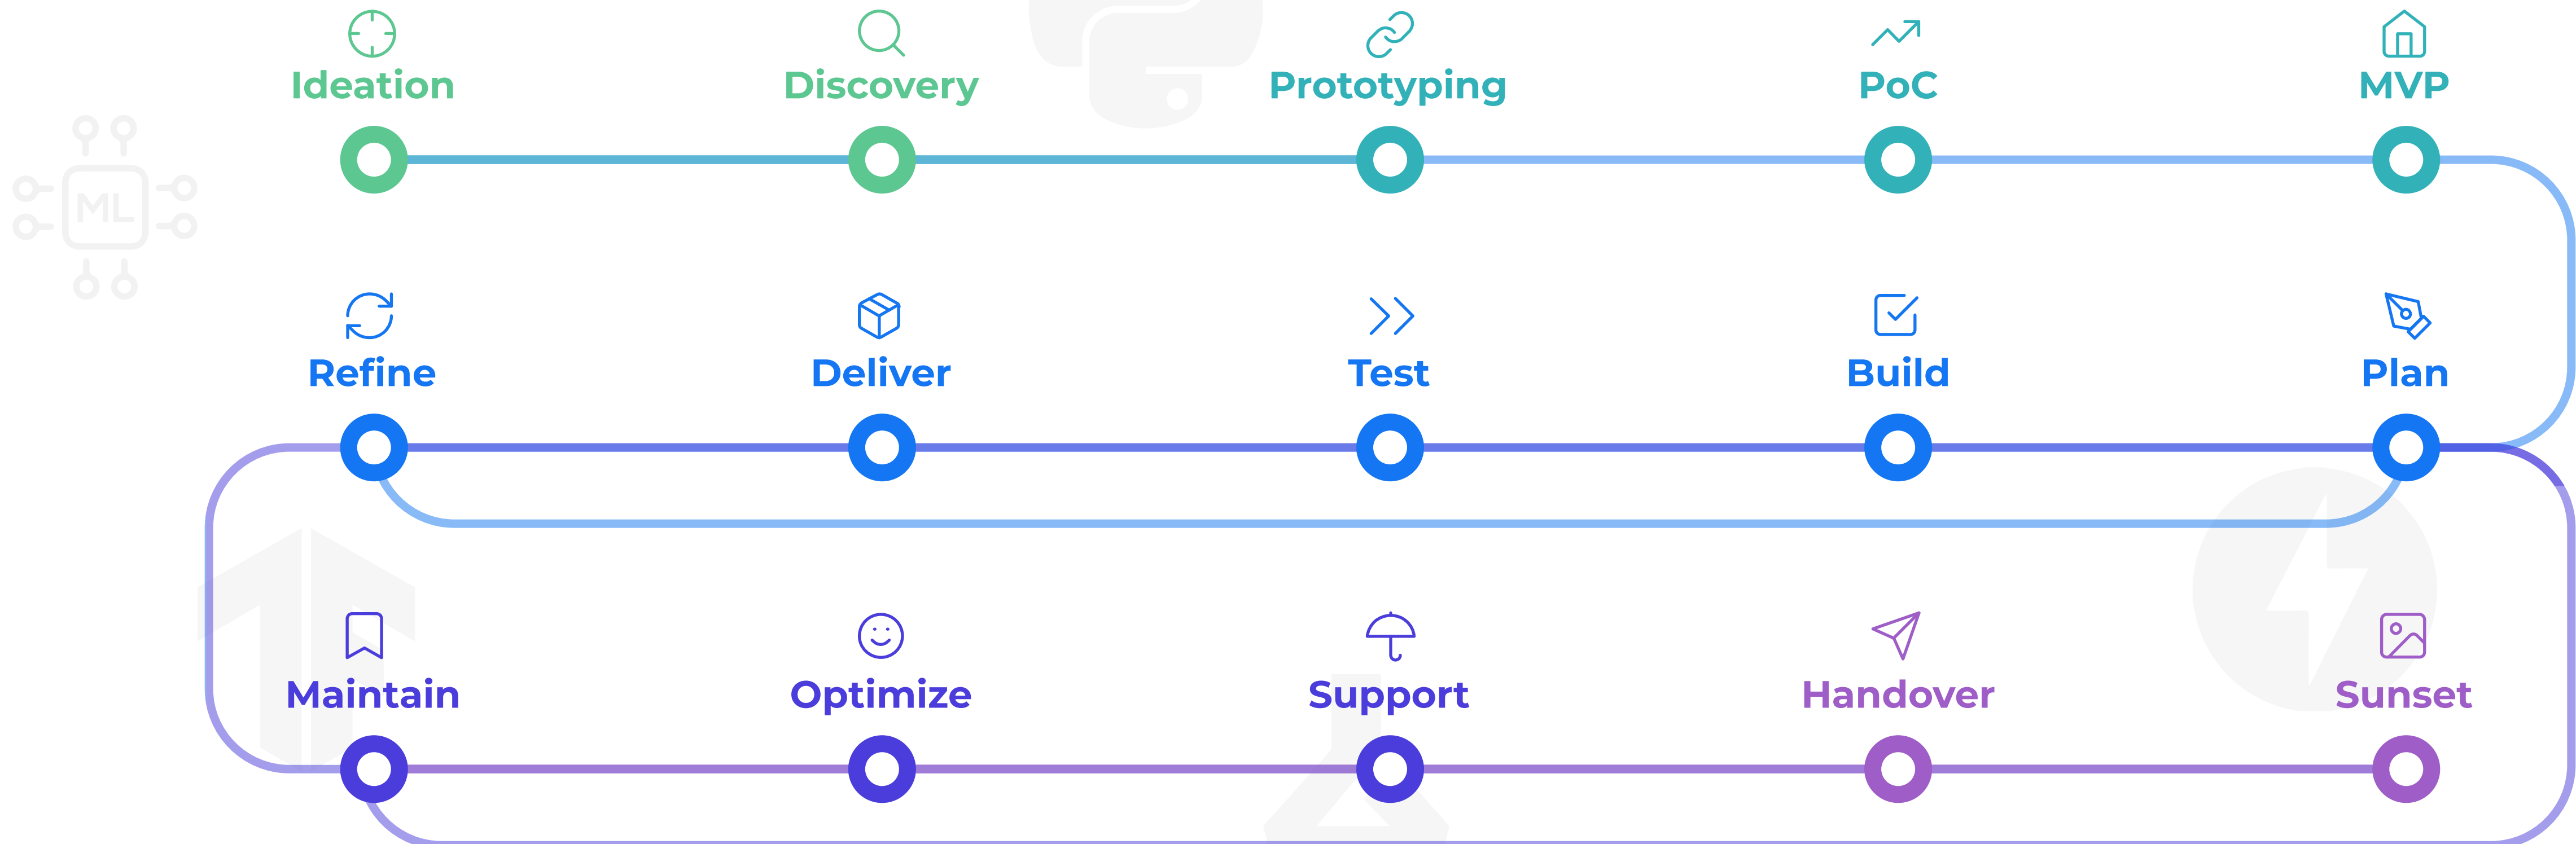

AI Ethics

Our company is dedicated to ethical and responsible AI, ensuring that our clients' machine learning models are transparent, fair, and unbiased.

Product & MVP Development

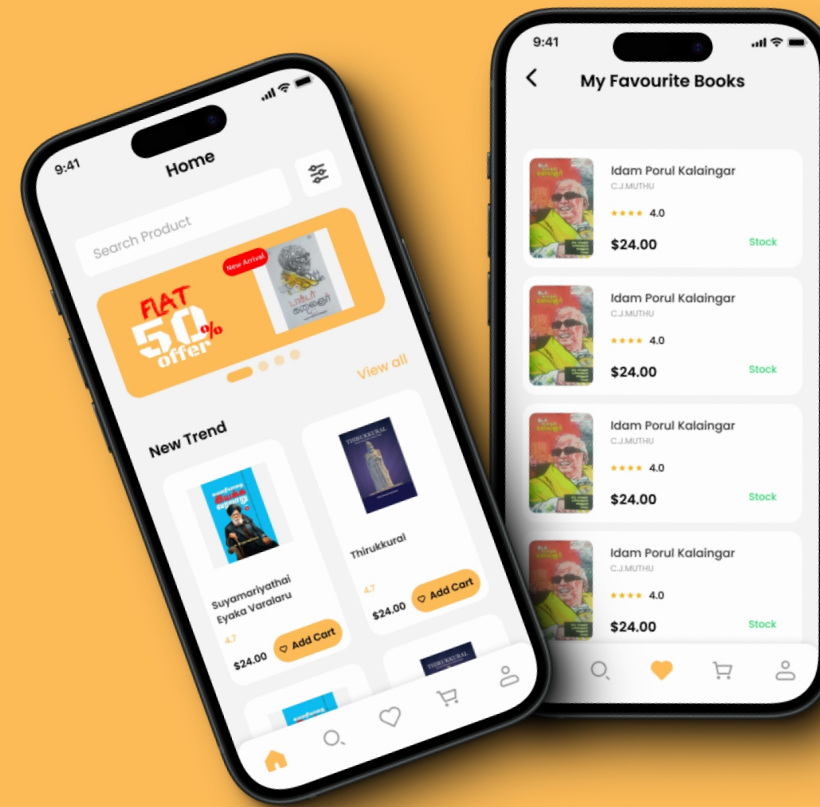

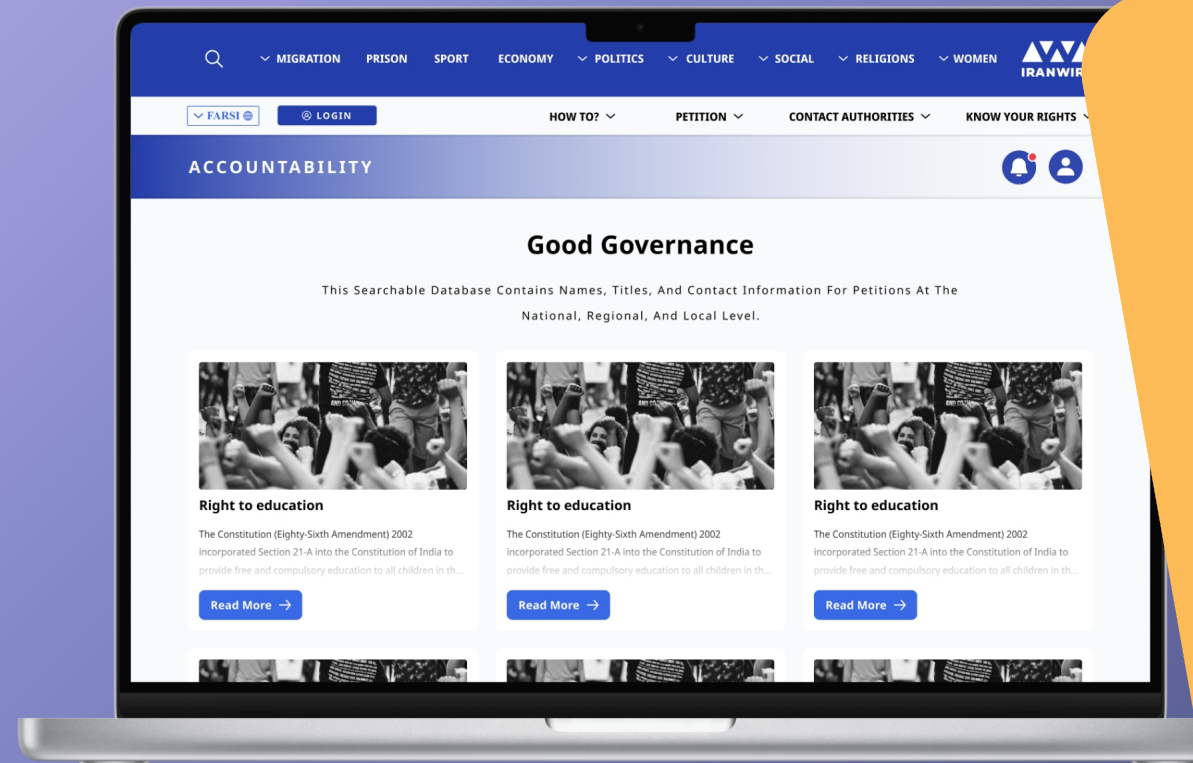

Ideate a new product, develop it, and take it to market.

Witty AI Bot

Witty AI Bot 12:15 PM
Hi Roger, How may I help you today!

Roger 12:15 PM
Is interest on debt instruments exempt from GST?

Witty AI Bot 12:16 PM
Yes. As debt instruments such as debentures, bonds etc. are in the nature of loans, interest thereon will be exempt from GST.

Roger 12:17 PM
Thank you!
